SUBJECT: Leachate in Ditches at 103 & Stony Island,
Lake Calumet Area - - Recommendations

At your request, the Health and Safety Unit reviewed the latest information regarding the leachate at the above mentioned location. Based on the information provided, it appears that the use of personal protective equipment is not required. However, the potential of undocumented hazardous wastes still exists.

It is therefore recommended that the workers be advised of this possibility and a contingency plan be established for the uncovering of discolored soil or drums and for the occurrence of any unusual odors.
